ALLOCATION SUMMARY

Out of 15 tasks: 0% automated · 0% AI-assisted · 100% human-only By volume × time: 0% automated · 0% assisted · 100% human Volume-weighted reflects business impact; task count reflects breadth of change.

Competitive position

Based on 2025 analyst reports (Gartner, ISG, HFS, IDC)

AI/Automation Maturity: 4 of 5

	Provider	AI	Industry	Cost	Implementation	Risk	Client
	Genpact	4	5	3	4	4	4
	Accenture	5	4	2	3	5	4
	TCS	3	4	5	4	4	3
	Infosys BPM	4	3	4	3	3	3
	WNS	3	4	4	4	3	3

Genpact is well-positioned to win with FinAxis by leveraging our mature Cora platform and early leadership in agentic AI for F&A operations. While we face strong competition on cost and AI breadth, our deep enterprise F&A heritage and proven outcomes provide a compelling value proposition that balances advanced capabilities with operational excellence.

KEY DIFFERENTIATORS

- Cora platform maturity and agentic AI (AP Suite) provide a distinct advantage in delivering intelligent automation for F&A, exceeding competitors like TCS and WNS.
- Deep enterprise F&A heritage and proven outcomes offer a level of specialized expertise and risk mitigation that Infosys BPM and TCS cannot match.
- Our balanced score across AI, Industry, Speed, and Risk demonstrates a robust, end-to-end solution that addresses FinAxis's operational needs more comprehensively than Accenture's cost disadvantage or TCS's lower outcome score.

KEY RISKS

- Accenture's higher AI score and perfect Risk score present a challenge, requiring us to clearly articulate the practical application and ROI of our agentic AI against their broader AI claims.
- TCS and Infosys BPM offer a more aggressive cost position, which we must counter by emphasizing the total value and outcome-driven benefits of Genpact's solution over a purely price-based comparison.

TECH STACK RECOMMENDATIONS

Recommended platforms by task type:

Complex multi-entity reconciliation

— — Reconciliation

— — ERP

Financial reporting review and adjustment

— — Planning

— — Reconciliation

— — Data Platform

Routine invoice data entry from structured PDF invoices

— — AR/Receivables

Routine reconciliation breaks investigation

— — Reconciliation

Vendor inquiry triage and response

— — Procurement

— — Customer Service

Expense classification and approval routing

— — ERP

Daily and weekly operational reporting compilation

— — Data Platform
